

HUFFMAN CORPORATION

**PRECISION, MULTI-AXIS
GRINDING, LASER & WATERJET
SYSTEMS AND MACHINING**

TURBINE

CUSTOMERS:
OEMs and their suppliers,
PMA manufacturers, repair
and overhaul shops

APPLICATIONS:
Blades, vanes, shrouds, seals
and more
New parts manufacture
Overhaul and repair

MEDICAL

CUSTOMERS:
Orthopedic implant and
instrument OEMs and their
suppliers

APPLICATIONS:
Femoral knee implants
Surgical instruments

VEHICLE

CUSTOMERS:
On- and off-road vehicle
OEMs and their suppliers

APPLICATIONS:
Diesel Fuel Injector
Components
Turbine Wheel Repair

MANUFACTURING SOLUTIONS AROUND THE WORLD THROUGH GRINDER, LASER & WATERJET TECHNOLOGY

Huffman Corporation achieves long term success for our customers by delivering exceptional technical and commercial results.

Since 1961, Huffman Corporation has delivered dramatic productivity gains through innovative technologies, products, and services.

Huffman provides exceptionally reliable, high-precision, multi-axis, CNC, superabrasive grinding, laser powder fusion welding, and abrasive waterjet machining systems.

Huffman also offers CAD/CAM integration, machine vision, virtual simulation, Open Architecture Control (OAC), CD-ROM documentation and remote diagnostic systems and services. Huffman is an ISO-9000:2000 and CE-approved supplier.

HUFFMAN DELIVERS A CYCLE OF SUCCESS

Huffman Corporation delivers exceptional commercial and technical value to its customers in the gas turbine, medical, vehicle, and other markets it serves.

Huffman develops, delivers and supports real gains in productivity by combining a strong emphasis on the entire manufacturing process with exceptionally reliable, high-precision, multi-axis, CNC, superabrasive grinding, laser powder fusion welding, and abrasive waterjet machining systems.

Huffman provides a lifetime of value with our ACCESS – ACQUISITION – EXTENSION Cycle of Success:

ACCESS

In the ACCESS phase, we collaborate with customers and suppliers to design and develop breakthrough manufacturing processes. Projects can include manufacturing process design and development, virtual simulation, tooling/fixture design, programming, inspection processes, full process documentation, even qualification parts.

We can further refine and “productionize” the process by running initial production quantities. This provides valuable and necessary information to validate your purchase and ROI criteria.

When customers need to move fast to respond to a business opportunity – faster than their internal capital expenditure approval cycle, or when initial volumes may not yet fully justify the capital investment in machinery – many choose to have Huffman manufacture the product.

ACQUISITION

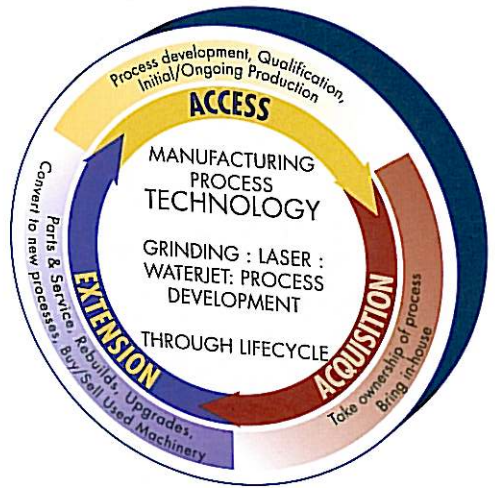

The ACQUISITION phase is traditionally considered “buying a machine.” Still, more than just selling machine hardware, Huffman places a strong emphasis on the whole manufacturing process outcome. We endeavor to have a fully proven process along with fully trained and enabled operators ready to maximize the capability of the machines. With proper planning and execution, Huffman systems are typically running in production within a few days after arrival thereby further reducing response time to market.

EXTENSION

The EXTENSION phase involves ongoing support for your investment throughout the production lifecycle with a complete range of products and services to keep you on the cutting edge of technology and competitiveness.

Of course, Huffman support includes basic service and spare parts that customers expect. But it also can go much further to include preventative maintenance programs, and ongoing upgrades, support and training to keep the equipment on the cutting edge of technology. Where possible, new features and programming tools developed for new machines are designed to be backward compatible to older systems.

Additionally, Huffman can help customers develop new applications using equipment at the Huffman factory, thereby avoiding the need to pull customers’ machines out of production for development work.
