

PC Upgrade

Many Huffman machine owners continue to run Digital Equipment Corporation (DEC) computers originally supplied with the machine in the 1980's. Since DEC no longer exists, failure of the computer often leaves the customer without a programming system and no immediate solution. Compaq acquired DEC and later merged with Hewlett-Packard. Consequently, parts and service are no longer available from DEC for their PDP and VAX products.

Huffman Corporation is offering a proactive solution to avoid production losses associated with a computer failure. Our PC upgrade employs current hardware and software technology providing reliable service and enhanced performance.

FEATURES

- Huffman Graphical User Interface (GUI)
- Huffman DNC software
- Huffman application software
- Windows 2000[®] operating system
- Latest technology Pentium 4[®] PC in an industrial case
- 17" monitor
- Available with a Rocketport[®] multi-port serial interface card allowing one PC to connect to several Huffman machines, eliminating the old switchbox.
- Remote diagnostics is standard. PC Anywhere[®] software allows you to directly connect your PC to a Huffman engineer's PC allowing full remote access to solve problems, provide assistance, or install/edit software.

BENEFITS

- **boosts production**
faster
Avoid lost production due to downtime
- Enjoy quicker, easier part program generation with one-click downloading
- **instantaneous**
Upload and download fixture offsets and T-codes right from the PC
- **easier**
Manage wheel files right from the PC
- Easier data file editing
- **assurance**
Connect the PC to your network for automatic backups or perform backups to CD
- **familiar**
Standard hardware and operating system means your IT personnel can easily support the system.
- **friendly**
The Windows operating system comes with standard, familiar application packages such as Word, Excel and Outlook.
